Pass Your Next Certification Exam Fast!

Everything you need to prepare, learn & pass your certification exam easily.

365 days free updates. First attempt guaranteed success.

Try **Desktop Test Engine** before you buy

Instant Download

After Payment, our system will send you the products you purchase in mailbox in a minute after payment. If not received within 2 hours, please contact us.

365 Days Free Updates

Free update is available within 365 days after your purchase. After 365 days, you will get 50% discounts for updating.

Money Back Guarantee

Full refund if you fail the corresponding exam in 60 days after purchasing. And Free get any another product.

Security & Privacy

We respect customer privacy. We use McAfee's security service to provide you with utmost security for your personal information & peace of mind.

High-Quality Certification Exam Premium VCE Braindumps materials

Exam : HP0-661

Title : NonStop Systems and Technologies

Vendors : HP

Version : DEMO

NO.1 What is a mandatory requirement for installing a single-enclosure NonStop S74000 server?

- A. raised floor
- B. ventilated room
- C. air conditioning
- D. 240V power

Answer: B

NO.2 Why does disk I/O throughput improve as systems are expanded?

- A. Disk process checkpointing is reduced.
- B. More logical volumes are available for use.
- C. Larger NonStop TMF audit trails are possible.
- D. The newly added disks are faster.

Answer: B

NO.3 Which statement best describes disk cache blocks?

- A. Entry sequenced index blocks are always kept in cache.
- B. Different disk cache block sizes exist to assist in performance tuning.
- C. Different file types require different disk cache block sizes.
- D. Changes to disk cache block values take effect after the next system cold load.

Answer: B

NO.4 A ServerNet buffer board is a part of _____.

- A. an IOMF CRU
- B. a PMF CRU
- C. a SWAN concentrator
- D. a PMCU

Answer:A

NO.5 Power to the NonStop S-series enclosures is set to the proper voltage by _____.

- A. configuring the power switch on the PMCU
- B. auto-ranging circuitry within the power supply
- C. ordering the proper part number for the voltage required
- D. ordering the power adapter appropriate to the voltage supplied

Answer: B

NO.6 Group numbers are important because they _____.

- A. correspond to the processor numbers housed within the group
- B. identify the system enclosure in which a system component is located

- C. provide the ability to easily switch disk drives from group to group
- D. determine the order in which I/O enclosures are added to the system

Answer: B

NO.7 What are advantages of a message-based operating system architecture? Select TWO.

- A. It supports system and peripheral expansion to match business growth.
- B. All messages are shared between processes using shared-memory buffers.
- C. Programmers can select different memory buffer sizes based on message priority.
- D. Applications do not need to be modified when adding new hardware or processes since the operating system translates device and process names into their physical locations.
- E. Additional networking software is not needed to extend the capability of the message-based operating system to a network of NonStop systems.

Answer:AD

NO.8 Which peripherals can you connect to a NonStop S-series server via AWAN?

- A. ATM devices
- B. standard serial printers
- C. tape drives
- D. X.25 connected devices

Answer: B

NO.9 In accessing a local process, users and user programs need only provide the name of the process.

Why?

- A. The file system translates the process name to a physical location using internal tables.
- B. All processes on the system keep tables that contain the names of all other processes on the system.
- C. A process in a processor can only communicate with other processes in the same processor.
- D. Processes do not communicate by name as they need to know the location of the process they are trying to access.

Answer:A

NO.10 Two processors within a single enclosure connect to each other through which

component?

- A. SEBs
- B. PMCU
- C. backplane
- D. IOMFs

Answer: C

NO.11 ServerNet routing tables are generated based on the _____? Select TWO.

- A. SCF configured settings in the \$ZZKRN subsystem
- B. settings in the group ID switches
- C. number of routers between nodes
- D. manner in which the SEB cables are routed
- E. ServerNet topology configuration setting for the group

Answer: BE

NO.12 An enterprise management tool is typically used to operate and manage _____.

- A. computer systems from different vendors
- B. similar computer systems spread throughout a large enterprise
- C. distributed database systems on large networks
- D. multiple databases on a single system

Answer:A

NO.13 Which software is required to implement RDF?

- A. TCP/IP
- B. NonStop TMF
- C. NonStop TS/MP
- D. RSC

Answer: B

NO.14 A service processor _____. Select TWO.

- A. has interfaces to both the ServerNet hardware and the serial maintenance bus (SMB)
- B. runs its own independent operating system
- C. connects directly to system fans
- D. routes Guardian interprocess communications
- E. manages communications only to the processor within its enclosure

Answer:AB

NO.15 A business transaction consists of _____.

- A. all steps necessary to transform a database from one consistent state to another
- B. all steps necessary to transform a data file from one consistent state to another
- C. all steps necessary to transform a local database from one consistent state to another
- D. an individual record update on a local or remote data file

Answer:A

NO.16 What is the primary function of the Expand subsystem?

- A. transfers data between geographically dispersed NonStop systems
- B. allows a single node to grow beyond 16 processors
- C. connects multiple NonStop systems together to form one network
- D. connects NonStop systems to systems manufactured by other vendors

Answer: C

NO.17 Which term identifies a collection of routers and ServerNet links?

- A. adapter
- B. fabric
- C. SAC
- D. LIF

Answer: B

NO.18 TSM workstations can be connected to either a public LAN or a dedicated TSM LAN.

Which functions

are available to TSM when installed for use on the Public LAN? Select TWO.

- A. low level link
- B. service application
- C. EMS event viewer
- D. system start
- E. notification director

Answer: BC

NO.19 Which component does NOT contain at least one ServerNet Addressable Controller?

- A. IOMF CRU
- B. SWAN concentrator
- C. E4SA
- D. PMF CRU

Answer: B

NO.20 Which advantage does the NonStop S-series RISC processor provide over CISC

processors in earlier systems?

- A. customized, special purpose instructions
- B. numerous addressing modes
- C. optimized instruction pipelines
- D. multicycle machine instructions

Answer: C
